

Rules governing quizzes

- Students are not permitted to ask questions of the examiner, except in cases of supposed errors or ambiguities in quiz questions, illegible or missing material, or the like.
 - Students are not permitted to use or operate electronic devices including but not limited to telephones, computers, smart watches other than those authorized by the examiner. Electronic devices other than those authorized by the examiner must be **completely powered down** if present at the place of writing.
 - **Observation and Documentation of Academic Misconduct.** If academic misconduct is observed by the examiner during the quiz, the incident will be documented. Students who are suspected violation of the Academic Conduct Code **will be permitted to complete the quiz without interruption** unless a serious disruption occurs. In accordance with university policy, no academic penalty will be applied at the time of the quiz.
 - If academic misconduct is observed by the examiner, the examiner will meet with the student and inform the student of the suspected violation after the quiz. The examiner is required to document the student's response. The examiner or student may request that a DAIR (Designated Academic Integrity Representative) be present.
 - The examiner will report suspected violations of the Code to the designated Dean of the College of Arts and Sciences using the *Instructor Report of Student Academic Misconduct* form. This form will be accompanied by a statement indicating the supporting evidence upon which the examiner has relied as well as the examiner's documentation of the student's response to the charges.
-

1. Calculators are allowed but not required.
2. Students are not allowed to bring their own scratch paper, but they may ask the examiner for scratch papers if needed.
3. Any work written on the scratch paper will not be evaluated and will not be considered as part of a student's official answers. Students are required to submit all scratch paper to the examiner at the end of the examination.
4. Unless otherwise indicated, round numerical answers to a reasonable number of decimal places.

Formula Sheet

Population mean formula. $\mu = \frac{\sum x_i}{N}$ where the summation is taken over all data points in the population, and N is the population size.

Population variance formula. $\sigma^2 = \frac{\sum (x_i - \mu)^2}{N}$ where the summation is taken over all data points in the population, and N is the population size.

Population standard deviation formula. $\sigma = \sqrt{\sigma^2}$.

Sample mean formula. $\bar{x} = \frac{\sum_{i=1}^n x_i}{n}$, where n is the sample size.

Sample variance formula. $s^2 = \frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n - 1}$, where n is the sample size.

Sample standard deviation formula. $s = \sqrt{s^2}$.

Normal distribution/Bell curve

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} \exp(-1/2[(x - \mu)/\sigma]^2)$$

Change of Variable formulas.

Given a normal variable x with a mean μ and a standard deviation σ , we may convert it to a standard normal variable z by the formula

$$z = \frac{x - \mu}{\sigma}$$

Then,

$$P\left(\frac{x - \mu}{\sigma} \leq a\right) = P(x \leq a\sigma + \mu)$$

$$P\left(\frac{x - \mu}{\sigma} \geq a\right) = P(x \geq a\sigma + \mu)$$

for any number a .

$$P(x \leq a) = P\left(z \leq \frac{a - \mu}{\sigma}\right)$$

$$P(x \geq a) = P\left(z \geq \frac{a - \mu}{\sigma}\right)$$

for any number a .

z_α formulas.

- $P(z \geq z_\alpha) = \alpha$.
- For any $0 \leq \alpha \leq 1$ we have $-z_\alpha = z_{1-\alpha}$.

Sampling distribution (Ch.8) formulas.

Fix a population and a sample size n . Assume all samplings are random.

Theorem	need $n < 0.05N$?
1 $\mu_{\bar{x}} = \mu$ (μ is the mean of the original population)	NO
2 $\sigma_{\bar{x}} = \sigma/\sqrt{n}$ (σ is the standard deviation of the original population)	YES
3 x being approximately normal implies \bar{x} is approximately normal	NO
4 CLT: $n \geq 30$ implies \bar{x} is approximately normal	YES
5 $\mu_{\hat{p}} = p$	NO
6 $\sigma_{\hat{p}} = \sqrt{\frac{p(1-p)}{n}}$	YES
7 $np(1-p) \geq 10$ implies \hat{p} is approximately normal	YES
